

Eclipse AirHeat Burners

Model AH

Data sheet Edition 12.18

Version 2

Parameter	Specifications
Maximum Input, Btu/h/lf (kW/m)¹ <i>For chamber pressures outside the given range or for varying chamber pressure conditions, contact Eclipse, Inc.</i>	1,000,000 (961)
Minimum Input, Btu/h/lf (kW/m)¹	25,000 (24,5)
Main Gas Inlet Pressure, "w.c. (mbar) <i>Fuel pressure at gas inlet (Tap B)</i>	8.7 (22)
High Fire Visible Flame Length, inches (mm)² <i>Measured from the outlet end of the combustor.</i>	43 (1100)
Upstream Temperature Limit, °F (°C)	Packaged Blower ³ -40 to 104°F (-40 to 40°C)
	Remote Blower, Standard Body -40 to 500°F (-40 to 260°C)
	Remote Blower, SS Body -40 to 750°F (-40 to 400°C)
Downstream Temperature Limit, °F (°C)	321 SS Wings 1300°F (704°C)
	330 SS Wings 1500°F (815°C)
Flame Detection⁴	Flame rod or UV scanner
Ignition	Direct Spark Ignition ⁵ Spark Ignited Pilot ⁶
Fuels⁷ <i>For any other mixed gas, contact Eclipse, Inc.</i>	Natural Gas, Propane, Butane
Approvals	

¹ At Neutral Conditions and Δp Air = 1.0" w.c. (2.5 mbar) Δp air is measured between tap A and tap C (see page 5 for tap locations).

² Based on typical parallel process air flow. If mounted in a cross flow, flame will be shorter.

³ Based on blower motor limitations

⁴ Eclipse recommends flame supervision to meet all applicable local codes and standards.

⁵ Direct spark ignition can be used on burners up to 3.0 ft (1 m) long and up to 60% capacity.

⁶ Pilot input is approximately 25,000 Btu/h (7.3 kW).

⁷ See Design Guide 135 for more information about typical fuel composition and properties.

- All inputs are based on gross calorific values and standard conditions: one atmosphere, 70°F (21°C).
- All information is based on laboratory testing in neutral (0.0" w.c.) chamber. Different chamber size and conditions will affect data.
- Blower motor service factors greater than 1.0 may be required when firing into negative chamber pressure applications. For specific application questions, contact Eclipse.
- Eclipse reserves the right to change the construction and/or configurations of our products at any time without being obliged to adjust earlier supplies accordingly.

Performance Graphs

Notes on Control and Operational Zone

This graph shows the amount of excess air through the burner at various Δp air settings and as a function of the input. At lower excess air levels, complete combustion will require sufficient O₂ in the process air flow.

Contact Eclipse with details on your application.

NO_x and CO emission data is given for:

- Ambient combustion air (~70°F, 20°C)
- Minimal process air velocity
- Neutral chamber pressure
- Natural gas

Emissions are influenced by:

- Chamber conditions
- Fuel type
- Firing rate

CO emissions are largely influenced by chamber conditions. Contact your local Eclipse

Process Flow Considerations

Dimensions and Specifications

AH0900T	9.0 (2635)	36 (914)	42 (1067)

Multiple Staged Rows

Multiple burner rows can be configured as shown below. Each row is typically staged with individual air and gas trains to maximize turndown (up to 40:1 per row). See Datasheet 135 for applicable firing rates.

For More Information

The Honeywell Thermal Solutions family of products includes Honeywell Combustion Safety, Honeywell Combustion Service, Eclipse, EXOTHERMICS, HAUCK, Kromschröder and MAXON. To learn more about our products, visit ThermalSolutions.honeywell.com or contact your Honeywell Sales Engineer.
